

VƯƠNG VIỆT HÙNG

PERSONAL DETAILS

Full name:	Vương Việt Hùng	Nationality:	Vietnamese
Phone:	+84-583-885-391	Languages:	Vietnamese (Native)
Email:	vuongviethung156@gmail.com		English (IELTS 7.5)
Residence:	Hanoi, Vietnam	ORCID:	 0009-0006-8041-7608

EDUCATIONAL QUALIFICATIONS AND ACADEMIC AWARDS

Soongsil University	Seoul, South Korea
Master of Science in Engineering	March 2024 – March 2026
– Department: School of Electronic Engineering	
– University ranking:	
#29 in South Korea, #801 - 1000 globally for Computer Science (THE Rankings, 2025)	
– GPA: 4.24/4.50	
– Scholarships:	
+ Special Scholarship for International Students	
+ Research Assistant (RA) Scholarship	
– Thesis title: Online Continual Learning for LiDAR Panoptic Tracking	
– Thesis length: 10,387 words	
– Thesis summary: Developed an online continual learning framework for LiDAR panoptic tracking, using scene flow-guided temporal association and self-training to adapt to sequentially changing environments.	

Hanoi University of Science and Technology	Hanoi, Vietnam
Bachelor's Degree in Control Engineering and Automation	August 2019 – September 2023
– University ranking:	
#1 in Vietnam, #360 globally for Engineering (QS Rankings, 2022)	
– GPA: 3.34/4.00	
– Department: School of Electronic and Electrical Engineering	
– Thesis title: Application of Stereo Matching in SLAM for Autonomous Vehicles	
– Thesis length: 13,536 words	
– Thesis summary: Investigated stereo matching for depth estimation and 3D reconstruction in autonomous-vehicle SLAM, implemented and evaluated classical and deep-learning-based dense stereo matching approaches.	

EMPLOYMENT HISTORY

VinDynamics	Hanoi, Vietnam
SLAM & Navigation Engineer	March 2026 – current
– Worked on visual-inertial odometry and multi-sensor height mapping for real-time perception on humanoid robotic platforms.	
– Contributed to VIO pipeline profiling and latency optimization, and extended GPU-based height mapping with LiDAR, depth camera, IMU, and joint-state integration.	

ANDA Lab, Soongsil University	Seoul, South Korea
Research Assistant	March 2024 – March 2026

- Conducted research on LiDAR panoptic segmentation and tracking, with a focus on domain adaptation and online continual learning.
- Contributed to model development and evaluation, research publications, researcher mentoring, and technical seminars.

Rikai Mind

AI Engineer Intern

Hanoi, Vietnam

August 2022 – January 2023

- Developed a computer vision system for object volume estimation from monocular images and camera–object distance, using CNN-based features and keypoint regression.
- Contributed to data collection, model development and evaluation, and deployment of the inference pipeline through a FastAPI-based service.

OTHER RESEARCH EXPERIENCE

Mandevices Laboratory, Hanoi University of Science and Technology

Research Assistant (Voluntary)

Hanoi, Vietnam

August 2020 – September 2023

- Conducted research on deep-learning-based bearing fault diagnosis, including simulation-based domain adaptation to address limited real-world training data.
- Contributed to data collection, model development and evaluation, research publications, and researcher mentoring.

RESEARCH OUTPUTS

Refereed journal articles

1. **Vuong, H. V., & Yoo, M.** (2026). Domain adaptive LiDAR panoptic segmentation via pseudo-supervised instance learning. *IEEE Transactions on Intelligent Transportation Systems*.
<https://doi.org/10.1109/TITS.2026.3695516>
JCR Quartile: Q1, Journal Impact Factor: 9.1 (2025),
 - Contribution: Designed and implemented the proposed methodology; designed and conducted the experiments; analyzed and interpreted the results; prepared the manuscript.
 - Research outcome: Proposed PILLA for instance-level pseudo-supervised domain adaptation, achieving 35.97% PQ on nuScenes and outperforming AdaptLPS by 13.14 percentage points.
2. Ha-Phan, N.-Q., **Vuong, H. V., & Yoo, M.** (2025). Instance embedding as queries for DETR-based LiDAR panoptic segmentation. *IEEE Transactions on Intelligent Vehicles*, 10(10), 4629–4641.
<https://doi.org/10.1109/TIV.2024.3488035>
Co-first authors: Ha-Phan, N.-Q. and Vuong, H. V.
JCR Quartile: Q1, Journal Impact Factor: 14.3 (2025)
 - Contribution: Primarily designed and implemented the proposed methodology; conducted the experiments, analyzed and interpreted the results; prepared the manuscript with the co-first author.
 - Research outcome: Proposed a DETR-based architecture using instance embeddings as object queries, achieving 63.40% PQ on SemanticKITTI and 77.08% PQ on nuScenes, outperforming previous methods by 1.20 and 1.94 percentage points, respectively.
3. Nguyen, K. N. M., **Vuong, H. V.,** Ha-Phan, N.-Q., & Yoo, M. (2025). FuPaSCo: Long-range and local context fusion for 3D panoptic scene completion. *Image and Vision Computing*, 163, 105776.
<https://doi.org/10.1016/j.imavis.2025.105776>
JCR Quartile: Q1, Journal Impact Factor: 5.0 (2025)

- Contribution: Provided consultation on the methodology; assisted with the experiments by developing an evaluation tool for performance analysis; reviewed the manuscript and provided feedback during its preparation.
 - Research outcome: Developed FuPaSCo, a dual-branch CNN–Transformer framework for LiDAR panoptic scene completion, achieving 26.10% PQ[†] on SemanticKITTI and outperforming PaSCo by 2.49 percentage points.
4. Nguyen, T. H., **Vuong, V. H.**, Dao, D. T., Tran, T. T., & Hoang, S. H. (2024). Generalized simulation-based domain adaptation approach for intelligent bearing fault diagnosis. *Arabian Journal for Science and Engineering*, 49(12), 16941–16957. <https://doi.org/10.1007/s13369-024-09282-1>
JCR Quartile: Q2, Journal Impact Factor: 3.1 (2025)
- Contribution: Assisted with data collection; developed the bearing vibration signal model; conducted experiments combining the signal model with the baseline deep-learning approach; contributed to the analysis and interpretation of the experimental results.
 - Research outcome: Developed a simulation-based domain adaptation approach using synthetic bearing vibration signals, achieving 74–98% fault classification accuracy across different bearing types.

Published conference proceedings

1. Nguyen, T. H., Le, H. A., **Vuong, V. H.**, Tran, L. D. A., Dao, D. T., Tran, T. T., & Hoang, S. H. (2024). ConvMamba: A data-efficient neural network for bearing fault diagnosis. In *2024 7th International Conference on Green Technology and Sustainable Development (GTSD)* (pp. 165–172). IEEE. <https://doi.org/10.1109/GTSD62346.2024.10674880>
- Contribution: Designed and implemented the proposed methodology; designed and conducted the experiments; analyzed and interpreted the results; prepared the manuscript with assistance from the co-authors.
 - Research outcome: Developed ConvMamba, a data-efficient architecture combining convolutional networks and Vision Mamba, improving classification accuracy by 27 percentage points over Hybrid-CNN-MLP on the CWRU bearing fault dataset.

Manuscripts under review

1. Pham, T. P., **Vuong, H. V.**, Ha-Phan, N.-Q., & Yoo, M. (2026). SM3-PSC: Sparse multi-modal Mamba for 3D panoptic scene completion with multi-scale feature refinement. *Manuscript submitted to IEEE Transactions on Image Processing*.
- Contribution: Provided consultation on the proposed methodology and reviewed the manuscript, provided technical feedback and suggestions during its preparation.
 - Research outcome: Developed SM3-PSC, a sparse multi-modal framework combining RGB and LiDAR features with Mamba-based context modeling, achieving 28.20% PQ[†] on SemanticKITTI while running the 3D pipeline 2.8× faster than FuPaSCo.
2. Nguyen, K. N. M., **Vuong, H. V.**, Ha-Phan, N.-Q., & Yoo, M. (2026). LW-PSC: Lightweight design for LiDAR panoptic scene completion. *Manuscript submitted to Applied Soft Computing*.
- Contribution: Provided consultation on the proposed methodology and reviewed the manuscript, provided technical feedback and suggestions during its preparation.
 - Research outcome: Developed LW-PSC, a lightweight BEV-based framework for LiDAR panoptic scene completion, achieving 13.59% PQ at 11.3 FPS while reducing the model size from 40.65M to 29.16M parameters.

RESEARCH GRANTS AND RELEVANT AWARDS

A Research on the Core Technologies for Securing Fully Autonomous Driving by Cooperation between Vehicles and Edge Computing (RS-2024-00335137), National Research Foundation of Korea (NRF), funded by the Korean government (Ministry of Science and ICT; MSIT), 2024–2028.

Participated as a researcher during master's research at Soongsil University.
